## PROFESSIONAL SUMMARY

Engineer who builds the system and runs the customer meeting. Two years owning enterprise infrastructure and ML pipelines end-to-end as the sole technical contact, equally at home in whiteboard architecture, a live demo, and the escalation call when production breaks. Ships agentic AI tooling, from a published MCP server to autonomous trading systems. Part-time Georgia Tech OMSCS (AI/ML).

## EXPERIENCE

### MOZEUS – Software Engineer

Atlanta, GA | 09/25 – Present

- Owned 6+ enterprise accounts end-to-end (discovery, solutioning, live demos, and production delivery) as the sole technical contact; turned recurring patterns across accounts into core Forge features, including a third-party AI-processing integration and a client-agnostic API adapter that conforms to any customer's spec.
- Built MoZeus Forge from zero, an internal Azure deployment platform (Bicep) that productized bespoke client engagements into repeatable deployments and supported 20% MoM growth.
- Cut Azure spend 50% (\$20K → \$10K/mo) by re-architecting compute and storage across client environments.
- Reduced new-account onboarding from 2 weeks to 1 day via ETL pipelines processing 1M+ records per client, removing the biggest blocker in the customer go-live path.

### BLUE YONDER – Software Engineer

Atlanta, GA | 03/24 – 09/25

- Unified 2,700+ microservice endpoints into a single API surface (.NET + React) serving 100+ daily enterprise users; became the go-to escalation point for client integration teams when production migrations broke.
- Cut ML model deployment cycles 60% across 8 environments with a publishing pipeline (automated rollback, strict versioning, and a full audit trail) built to enterprise compliance from day one.
- Built test infrastructure and automated backend scheduling workflows (Python/C#) to shift bug detection from QA to commit time.

### MANHATTAN ASSOCIATES – Research Engineer Intern

Atlanta, GA | 05/23 – 08/23

- Shipped RESTful microservices to production handling inventory updates and order events across 200+ fulfillment nodes.
- Built a Python monitoring dashboard that cut test cycles 20% and surfaced real-time insights to non-technical stakeholders.

### LIGHTER THAN AIR RESEARCH – Technical Project Engineer Intern

Sunnyvale, CA | 06/22 – 09/22

- Coordinated avionics certifications and stakeholder schedules for Pathfinder 1, a hydrogen airship at NASA Ames Research Center.

## EDUCATION

### GEORGIA INSTITUTE OF TECHNOLOGY

Online & Part-Time | Starting Fall 2026

M.S. Computer Science (Artificial Intelligence / Machine Learning)

### BOSTON UNIVERSITY

Boston, MA | 08/20 – 05/24

B.A. Computer Science | Minor: Business Administration and Management | Varsity Squash Captain

## PROFESSIONAL PROJECTS

### [PolyBot](#) – Autonomous Agentic Trading System | Python, SQLite, ML, Anthropic API

- Autonomous trading system for Polymarket 5-minute BTC markets: a multilayered probability model with uncertainty-adjusted position sizing and an agentic pipeline that backtests parameter changes and hot-swaps them live without downtime.

### [Financial-MCP-Server](#) – LLM Agent Tooling | Python, yFinance, MCP, PyPI

- Published an MCP server to PyPI (3,500+ downloads) giving LLM agents structured access to SEC filings, CFTC data, and Treasury yield curves.

### [MarketPulse](#) – Financial Analytics & ML Platform | Python, Pandas, Scikit-learn, Streamlit

- Trained a financial sentiment classifier on a 16-function weak-supervision labeling pipeline ingesting live RSS feeds, paired with a trading bot for end-to-end signal-to-execution validation.

### [TetrisBot](#) – Reinforcement Learning Agent | Python, TensorFlow, Pygame

- Deep Q-learning agent, achieving 250 average lines cleared with automated parameter tuning and a real-time GUI for agent eval.

## SKILLS

**AI / ML:** Anthropic API · MCP (Authoring) · Agentic Pipelines · LLM Output Validation · Tensorflow · Scikit-learn · Pandas | **Solutions:** Technical Discovery · Distributed System Architecture · Enterprise Onboarding · Live Demos | **Languages:** Python · C#/.NET · TypeScript · SQL | **Frameworks:** React · REST APIs · Microservices | **Cloud & Infra:** Azure · Bicep · KEDA · Docker · CI/CD · AWS | **Certifications:** Microsoft Azure Fundamentals (AZ-900)
