PROFESSIONAL SUMMARY

I build enterprise systems and I'm also in the room presenting them. Software and platform engineer with 2+ years shipping production infrastructure across cloud architecture, ML pipelines, and enterprise client delivery. Built internal platforms from scratch that fundamentally changed how companies sell and deliver their products, with direct revenue impact. Built production AI systems including published MCP servers and quantitative trading bots with LLM-powered pipelines. Incoming Georgia Tech MSCS (AI/ML).

EXPERIENCE

MOZEUS – Software Engineer

Atlanta, GA | 09/25 – Present

- Built MoZeus Forge, an internal Azure deployment platform automating product deployments via IaC templates, directly contributing to 30% month-over-month revenue growth by converting manual client workflows into scalable, repeatable offerings.
- Cut Azure infrastructure expense from \$20K to \$8K/month by redesigning cloud architecture across active client environments.
- Primary technical contact for 6+ enterprise accounts, owning discovery workshops, architecture reviews, live technical demos, and production engineering; funneled cross-account patterns to directly influence product roadmaps and expand sales surface area.
- Established ETL pipelines that processed 1M+ data points, accelerating account onboarding by 3 weeks.

BLUE YONDER – Software Engineer

Atlanta, GA | 03/24 – 09/25

- Architected backend aggregation layer spanning 2,700+ microservice endpoints serving 100+ daily enterprise users; built production .NET services and React UIs while acting as primary technical escalation across client integration teams.
- Deployed ML publishing pipelines across 8 environments, cutting deployment cycles by 60% and enforcing strict versioning, automated rollback, and full traceability to meet enterprise audit and compliance requirements.
- Automated backend scheduling workflows (Python, C#) and established NUnit testing infrastructure, reducing manual QA overhead and increasing team delivery velocity by 30% for enterprise client-facing features.

MANHATTAN ASSOCIATES – Research Engineer Intern

Atlanta, GA | 05/23 – 08/23

- Designed RESTful microservices supporting data exchange across 200+ fulfillment nodes in live production environments.
- Prototyped demand forecast proof-of-concepts on curated supply chain datasets, improving inventory prediction accuracy by 25% using evaluation frameworks spanning precision, recall, distribution analysis, and business impact metrics.
- Built Python-based monitoring dashboard to reduce test cycles by 20% and surface insights for non-technical stakeholders.

LIGHTER THAN AIR – Technical Project Engineer Intern

Sunnyvale, CA | 06/22 – 09/22

- Consolidated 1,200+ avionics and API artifacts into a unified traceability system, accelerating FAA certification.
- Drove cross-functional coordination across hardware, software, and QA to unblock critical-path certification milestones.

EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY

Atlanta, GA | Starting Fall 2026

M.S. Computer Science (Artificial Intelligence / Machine Learning)

BOSTON UNIVERSITY

Boston, MA | 08/20 – 05/24

B.A. Computer Science | Minor: Business Administration and Management | Varsity Squash Captain

PROFESSIONAL PROJECTS

<https://github.com/arnavbhatia1>

PolyBot – Quantitative Prediction Market Trading Bot | Python, SQLite, Discord API, Anthropic API

- Proprietary trading bot for Polymarket's 5-minute BTC markets. Implements a multilayered probability model, uncertainty-adjusted sizing, and a nightly agentic learning pipeline that walk-forward backtests parameter changes and hot-swaps weights autonomously.

Financial-MCP-Server – Financial Intelligence MCP Server | Python, yFinance, PyPI, MCP

- Published to PyPI. Enables LLM agents to query real-time market intelligence including SEC filings, CFTC positions, and Treasury yield curves, bridging the gap between financial data sources and agentic AI workflows.

MarketPulse – Financial Sentiment Platform | Python, Pandas, Scikit-learn, Streamlit

- Trained an ML classifier by ingesting live RSS feeds through a 16-function weak supervision labeling pipeline with a trading bot.

TetrisBot – Reinforcement Learning Agent | Python, TensorFlow, Pygame

- Deep Q-learning agent trained to play Tetris, achieving 250 average lines cleared per game after 10 training episodes with automated hyperparameter tuning and a real-time GUI for agent evaluation.

SKILLS

Customer Engagement: Solution Design · Discovery · Technical Demos · Stakeholder Presentations · Pre/Post-Sales | **Languages:**

Python · C#/.NET · Java · SQL · JS/TS · React · Bash · YAML · Streamlit | **Backend & Infrastructure:** Azure · AWS · Docker · Kubernetes · Bicep · Terraform · CI/CD · REST · OpenAPI · Microservices · MCP · SQLite | **Data & AI/ML:** Scikit-learn · Pandas · TensorFlow · NLP · Classifier Training · Feature Engineering · Reinforcement Learning · LLMs · Agentic AI · ETL Pipelines · Probability Modeling | **Certifications:** Microsoft Azure Fundamentals (AZ-900)
