SUMMARY

Forward-deployed engineer who embeds with enterprise customers: discovery, building, live demos, production ownership, escalations. Most recently owning 7+ enterprise accounts end-to-end, built the multi-tenant deployment platform that cut client onboarding from two weeks to one day, supporting about 20% annual revenue growth, and turned one-off client requests into products every account can buy. Deep in Python and agentic AI, publishing an MCP server with 8,000+ downloads and autonomous real-money trading systems.

EXPERIENCE

MOZEUS – ***Forward Deployed Software Engineer*** *Atlanta, GA | 09/25 – Present*

- Sole engineer across 7+ enterprise accounts, end to end: all discovery calls, live demos, production deployments, escalations.
- Cut client onboarding from 2 weeks to 1 day with a provisioning platform built from zero: parameterized Bicep modules deploy each client's full Azure stack, API adapters connect client systems in hours, and ETL pipelines land 1M+ client records yearly.
- Faster onboarding shortened sales cycles and won re-signs across current accounts, supporting about 20% annual revenue growth.
- Turned a one-off client request for AI photo backgrounds compositing customers' faces into a product now sold across accounts.
- Halved Azure compute cost from $20K to $10K/month by moving client workloads off always-on VMs onto scale-to-zero Container Apps with KEDA queue autoscaling, and reworked dynamic package loading so all product offerings run on demand.
- Embedded a 10-tool MCP server in the platform so AI agents can run provisioning and diagnostics against client infrastructure.

BLUE YONDER – ***Software Engineer*** *Atlanta, GA | 03/24 – 09/25*

- Unified 2,700+ REST microservice endpoints behind a single OpenAPI-documented gateway now serving 100+ enterprise users.
- Built the CI/CD publishing pipeline for ML deployment across 8 environments (GitHub Actions, automated rollback, versioning, full audit trail); cleared compliance first pass and spread organically into the companywide standard, cutting deploy time 60%.
- Automated back-end scheduling in Python and built the team's test infrastructure, moving bug detection from QA to commit time.

MANHATTAN ASSOCIATES – ***Research Engineer Intern*** *Atlanta, GA | 05/23 – 08/23*

- Built demand-forecasting ML prototypes with the warehouse ops team; product owners measured accuracy 25% over baseline.
- Delivered Java REST microservices moving live inventory data across 200+ fulfillment nodes to feed the forecasting prototypes.

LIGHTER THAN AIR RESEARCH – ***Technical Project Engineer Intern*** *Sunnyvale, CA | 06/22 – 09/22*

- Managed avionics certifications and stakeholder schedules for Pathfinder 1, the hydrogen airship at NASA Ames Research Center.

PROJECTS

Financial-MCP-Server – LLM Agent Tooling | *Python, FastMCP, PyPI*

- Open-source MCP server with 8,000+ PyPI downloads: 42 tools giving LLM agents keyless access to SEC EDGAR, CFTC, FRED, Treasury, and live market data; auto-publishes through Trusted Publishing, with each release gated on the pytest suite.

PolyBot – Autonomous Agentic Trading System | *Python · NumPy · SQLite · Polymarket CLOB*

- Built and operate an autonomous microstructure trader on 5-min BTC prediction markets: sub-350ms tick-to-order, Kelly-sized entries behind fee and adverse-selection gates; nightly loop retunes the exit engine, promoted only past pre-registered kill bars.

MarketPulse – Financial Analytics & ML Platform | *Python, Pandas, Scikit-learn, Streamlit*

- Weak-supervision sentiment pipeline (16 labeling functions, TF-IDF + logistic regression, the Anthropic API for narrative extraction) over live RSS news feeds, feeding a paper-trading bot running as an MCP client against the Financial-MCP-Server above.

SKILLS

Languages: Python, C#/.NET, TypeScript, SQL | **AI & Agents**: MCP Authoring and Clients, Anthropic API, LLM Agent Tooling, Eval-driven Development, Weak Supervision | **Cloud & Infra**: Azure (Container Apps, Bicep, KEDA, Azure SQL, Managed Identity), Azure DevOps, GitHub Actions, Docker, IaC | **Data & Integration**: ETL Pipelines, Multi-tenant Isolation, REST, OpenAPI, OAuth, RBAC, API Gateways, Redis | **Customer-Facing**: Technical Discovery, Solutioning, Live Demos, Deployment Ownership, Production Escalation

EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY *Online & Part-Time | Starting Fall 2026*

M.S. Computer Science (Artificial Intelligence / Machine Learning)

BOSTON UNIVERSITY *Boston, MA | 08/20 – 05/24*

B.A. Computer Science | Minor: Business Administration and Management | Varsity Squash Captain
