PROFESSIONAL SUMMARY

Engineer who builds the system and runs the customer meeting. Two years shipping enterprise infrastructure and ML pipelines from discovery through production, equally at home in whiteboard architecture, live demos, and customer escalation calls. Ships agentic AI tooling, from a published MCP server to a profitable prediction-market trading bot. Part-time Georgia Tech OMSCS (AI/ML).

EXPERIENCE

MOZEUS – Software Engineer

Atlanta, GA | 09/25 – Present

- Drove 20% MoM revenue growth by building MoZeus Forge from zero, an internal Azure deployment platform (Bicep/Terraform) that turned bespoke client engagements into productized, repeatable deployments.
- Ran 6+ enterprise accounts end-to-end (discovery, solutioning, live demos, and production delivery) as the sole technical owner; patterns surfaced across accounts shaped core features (RunComfy AI processing; Generic API adapter for client specs).
- Cut Azure infrastructure spend 50% (\$20K to \$10K/month) by re-architecting compute and storage across client environments.
- Cut new-account onboarding from 4 weeks to 1 day with ETL pipelines processing 1M+ records per client, eliminating the largest blocker in the customer-go-live path.

BLUE YONDER – Software Engineer

Atlanta, GA | 03/24 – 09/25

- Unified 2,700+ microservice endpoints into a single API surface (.NET + React) used by 100+ daily enterprise users; became the technical escalation point for client integration teams when migrations broke in production.
- Cut ML model deployment cycles 60% across 8 environments by shipping a publishing pipeline with automated rollback, strict versioning, and full audit trail, built to enterprise compliance requirements from day one.
- Automated backend scheduling workflows (Python, C#) and built out NUnit test infrastructure from scratch; caught bugs at commit time instead of QA, freeing the team to ship more client-facing features each quarter.

MANHATTAN ASSOCIATES – Research Engineer Intern

Atlanta, GA | 05/23 – 08/23

- Shipped RESTful microservices to production handling inventory updates and order events flow across 200+ fulfillment nodes.
- Improved inventory prediction accuracy 25% over baseline on curated supply chain datasets, evaluated against both precision/recall and business-impact metrics.
- Built Python monitoring dashboard reducing test cycles 20% and surfacing real-time insights to non-technical stakeholders.

LIGHTER THAN AIR – Technical Project Engineer Intern

Sunnyvale, CA | 06/22 – 09/22

- Coordinated avionics certification artifacts and stakeholder schedules for Pathfinder 1, a hydrogen airship flying out of NASA Ames Research Center.

EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY

Online | Starting Fall 2026

M.S. Computer Science (Artificial Intelligence / Machine Learning) | Online & Part-Time

BOSTON UNIVERSITY

Boston, MA | 08/20 – 05/24

B.A. Computer Science | Minor: Business Administration and Management | Varsity Squash Captain

PROFESSIONAL PROJECTS

<https://github.com/arnavbhatia1>

PolyBot – Quantitative Prediction Market Trading Bot | Python, SQLite, ML, Anthropic API

- Live profitable trading bot for Polymarket 5-minute BTC markets; 39% ROI over 3 months across 10k+ trades. Multilayered probability model with uncertainty-adjusted sizing; agentic pipeline that backtests parameter changes with autonomous hotswaps.

Financial-MCP-Server – Financial Intelligence MCP Server | Python, yFinance, MCP, PyPI

- Published an MCP server to PyPI (3,500+ downloads) giving LLM agents structured access to SEC filings, CFTC positioning, and Treasury yield curves.

MarketPulse – Financial Sentiment Platform | Python, Pandas, Scikit-learn, Streamlit

- Trained financial sentiment classifier on a 16-function weak supervision labeling pipeline ingesting live RSS feeds, paired with a trading bot for end-to-end signal-to-execution validation.

TetrisBot – Reinforcement Learning Agent | Python, TensorFlow, Pygame

- Deep Q-learning agent, achieving 250 average lines cleared with automated parameter tuning and a real-time GUI for agent eval.

SKILLS

AI / ML: Anthropic API · MCP · LLM Tooling & Evals · Agentic Pipelines · Scikit-learn · Pandas · TensorFlow | **Languages:** Python · TypeScript · C#/.NET · SQL | **Cloud & Infra:** Azure (2+ Years Production) · AWS · Bicep · Terraform · Docker · Kubernetes · CI/CD | **Backend:** REST · OpenAPI · Microservices · .NET · Node.js | **Certifications:** Microsoft Azure Fundamentals (AZ-900)
