PROFESSIONAL SUMMARY

Forward-deployed engineer who embeds with enterprise customers: runs discovery, builds the system, owns it in production. Two years as the engineer closest to the customer, most recently owning 7+ enterprise accounts end-to-end, collapsing onboarding from weeks to a day, and productizing client requests into platform features every account can use. Deep in Python and agentic AI, publishing an MCP server with 8,000+ downloads and building autonomous quant trading systems; broad across Azure, ETL, and multi-tenant integration.

EXPERIENCE

MOZEUS – ***Software Engineer*** *Atlanta, GA | 09/25 – Present*

- Embedded as the sole technical contact for 7+ enterprise accounts: discovery, solutioning, live demos, production, escalations.
- Cut time-to-value from 2 weeks to 1 day: built a multi-tenant Azure platform from zero (.NET, Bicep, 3-tier RBAC, 10-tool MCP) provisioning each client stack as parameterized modules, fed by Python ETL pipelines landing 1M+ records per client.
- Faster delivery shortened sales cycles, won re-signs, and expanded programs across account bases, supporting ~20% annual growth.
- Turned recurring client requests into reusable modules, so every new account reuses proven components instead of bespoke builds.
- Halved Azure spend, $20K to $10K/mo by re-architecting all client compute around KEDA autoscaling.

BLUE YONDER – ***Software Engineer*** *Atlanta, GA | 03/24 – 09/25*

- Unified 2,700+ microservice endpoints behind one OpenAPI-documented gateway serving 100+ daily enterprise users.
- Became the technical escalation point for client integration teams through their production migrations and enterprise go-lives.
- Cut ML deployment time 60% across 8 environments with a CI/CD publishing pipeline (GitHub Actions, automated rollback, strict versioning, full audit trail); cleared enterprise compliance first-pass and became the standard path company-wide.
- Automated backend scheduling in Python and built test infrastructure from scratch, moving bug detection from QA to commit time.

MANHATTAN ASSOCIATES – ***Research Engineer Intern*** *Atlanta, GA | 05/23 – 08/23*

- Shipped microservices moving inventory across 200+ fulfillment nodes, improving demand prediction accuracy 25% over baseline.
- Built Python monitoring dashboards to surface real-time inventory insight for non-technical stakeholders and cut test cycles 20%.

LIGHTER THAN AIR RESEARCH – ***Technical Project Engineer Intern*** *Sunnyvale, CA | 06/22 – 09/22*

- Coordinated avionics certifications and stakeholder schedules for Pathfinder 1, a hydrogen airship at NASA Ames Research Center.

PROFESSIONAL PROJECTS

Financial-MCP-Server – LLM Agent Tooling | *Python, FastMCP, PyPI*

- Published an MCP server to PyPI (8,000+ downloads) giving LLM agents keyless access to 42 tools across SEC EDGAR, CFTC, FRED, Treasury, and market data. Auto-publishes via Trusted Publishing and gated on pytest.

PolyBot – Autonomous Agentic Trading System | *Python · NumPy · SQLite · Polymarket CLOB*

- Built and operate an autonomous microstructure trader on 5-min BTC prediction markets: sub-350ms tick-to-order, Kelly-sized entries behind fee and adverse-selection gates; nightly loop retunes the exit engine, promoted only past pre-registered kill bars.

MarketPulse – Financial Analytics & ML Platform | *Python, Pandas, Scikit-learn, Streamlit*

- 16-function weak-supervision labeling pipeline over live RSS feeds (TF-IDF + logistic regression, Anthropic API for narrative extraction), feeding a paper-trading bot that runs as an MCP client against my own published server.

TetrisBot – Reinforcement Learning Agent | *Python, TensorFlow, Pygame*

- Deep Q-learning agent, achieving 250 average lines cleared with automated parameter tuning and a real-time GUI for agent eval.

EDUCATION

GEORGIA INSTITUTE OF TECHNOLOGY *Online & Part-Time | Starting Fall 2026*

M.S. Computer Science (Artificial Intelligence / Machine Learning)

BOSTON UNIVERSITY *Boston, MA | 08/20 – 05/24*

B.A. Computer Science | Minor: Business Administration and Management | Varsity Squash Captain

SKILLS

Languages & Core: Python · C#/.NET · TypeScript · SQL | **AI & Agents:** MCP (Authoring + Client) · LLM Agent Tooling · Eval-driven development · Weak Supervision | **Data & Pipelines:** ETL Pipelines · Azure SQL · Redis · Multi-tenant Isolation | **Cloud & Infra:** Azure (Container Apps · Bicep · KEDA) · Docker · CI/CD · IaC | **Integration & Security:** REST · OpenAPI · OAuth · RBAC · API Gateways · Enterprise Compliance | **Customer-Facing:** Technical Discovery · Solutioning · Live Demos · Deployment Ownership · Production Escalation | **Certifications:** Microsoft Azure Fundamentals (AZ-900)
